

CIAM Education S/C report 2021

The Education SC has been in contact via E-mail during the year discussing some matters described here.

We managed to get our proposal for increasing the scholarship, Spirit of flight, to 2500 E to go through the voting at the Plenary meeting.

We made quite a lot of work providing articles for the FAI web to show many good examples when aviation was used in education. A handful articles was published. All of them with young pilots succeeding in different areas. Here are links to some of the articles from mid-2020 up to today.

Most of the time during the year was spent on our Rooike project. We finally got all together so now our web page on the official FAI web is up and running. The web page includes workshops and instructions how to make a Rookie project within a club or in a school. There is also a postal contest. During the project we made good connection with the FAI office and to the FAI Education Commission. Here is a link to the Rookie project.

Work was also done to pick the best candidate for the 2021 Scholarship, Spirit of flight.

A start up for a new education class with a small RC glider was also discussed. This work will continue, it's a thought for a follow up project after the Rookie project.

Some work was also spent to improve our FB group "CIAM Education" where its possible for anyone to share good ideas and good examples when aviation was used in education.
